

Aluline Club Football Goals

In the late 1990's we introduced the first custom extruded aluminium Safety Football goals to Australia, and now have launched the second generation product.

Building on the excellent reputation on the original design, the new system has a new extrusion, retains fully welded corners for maximum strength and durability, and a single length crossbar for rigidity and OHS reasons (eliminating pinch points).

The goals retain the geometrically strong oval shape and are again the maximum permitted size for additional strength and stability.

The new version also includes a new locking net hook system. Designed to be operated with only a standard 10 or 20c coin, the system locks the net into place so it can never accidentally spring loose. The system is still fully enclosed within the profile as before to minimise risk of injury to users.

Goals feature regulation white powder-coated finish, "P" frame net supports, ground sleeves and caps. Additional sleeves, and ground net frames are also available.
