BASLINE FIBREGLASS BASKETBALL BACKBOARD

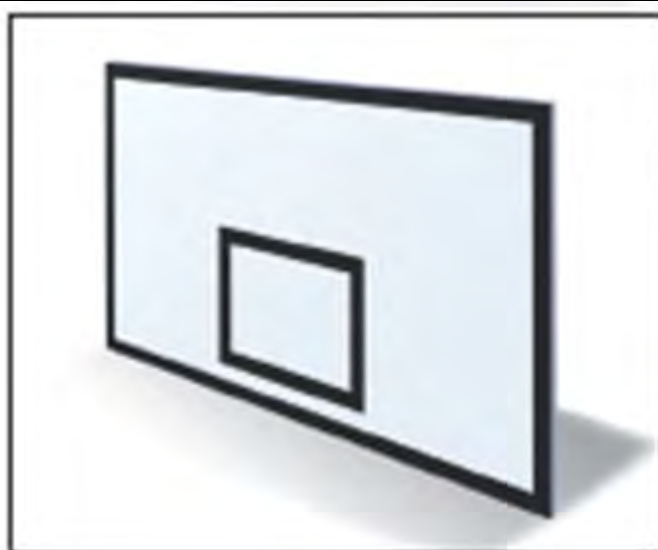

Basketball Backboard

The Baseline backboard is a cost effective entry level backboard that can be fitted to many Action Venue Systems Basketball systems.

Designed to provide a superior product to wooden backboards, this system includes a glass fibre/resin application to a solid timber core for additional weather resistance and rigidity, finished in a hard wearing gel coat.

This product has similar performance to timber boards in terms of rebound, but is vastly superior strength and weather resistance and offers a budget alternative with a range of higher level upgrades that can be fitted at any time down the track.

Can be retrofitted to replace timber backboards on existing systems.

Weatherproof gel coat
Resin coat
Multi-directional Fibre layer
Solid core
