

International Hockey Goals

The preferred goal design for FIH events worldwide, including Champions Trophy and World Cup events.

Unique aluminium profile specifically designed for Hockey. Internally strengthened to limit denting, and non rust for use on synthetic fields.

Innovative free hanging net design prevents ball rebound of the net support frame, and secure net attachment ensures the ball cannot get through.

The backboards are aluminium backed with poured in place polyurethane backboards. Unlike timber models, these systems cannot rot over time, essential in wet field environments.

Systems are supplied complete with wheels for mobility and the goal frame has a regulation white finish. Flat pack system for ease of transport and assembly on site.

Supplied complete with braided heavy duty nets.
