

## Protective Wall Padding

Wall padding has become an important protective measure in facilities around the world, and Our range is intended to give options to facility owners and designers to meet their specific needs.

### DESIGN FEATURES:

Mounted on OSB backing boards, these pads never sag like unsupported budget pads, and are specifically designed to perform as purpose built wall pads as opposed to a gym mat adapted to the purpose.

They can be permanently fastened to the walls through a specially designed nailing strip — without having to screw through the face of the pad and leaving a dangerous screw head for users to hit. Pads can also be installed with concealed aluminium channels for a completely hidden attachment, and if required ease of removal.

Pads are supplied as a standard 1800 x 600 mm size and are supplied with an easy to clean, and low abrasion vinyl covering in a wide range of colours. Corner systems can also be supplied, or pads can be cut in the field during installation.

Moulded plug recesses are also available if required.

### WPES - ESSENTIALS WALL PADS

A budget alternative, the Essentials system includes the above design features, but uses a lower grade of 50 mm thick re-bonded polyurethane foam to give appropriate protection without the cost.

### WPST - STADIA WALL PADS

A premium padding solution using the latest cross linked Neoprene foam products and incorporating a **fire retardant treatment** to meet demanding standards.
