

## WALK DRAW DIVIDING CURTAIN

The Essentials walk Draw curtain is budget oriented solution to reduce ball movements between courts in sports facilities.

As opposed to the more common vertical retracting systems, walk draw curtains retract to the side of the building on a cable or track, and store against the wall or in a cupboard.

These systems are made from the same mildew and fire resistant rip stop vinyl base as the roof retractable systems, but do not have a steel member in the base to allow them to retract.

The curtain is mounted on specially designed nylon rollers that ensure it glides smoothly into position and back again, and the system can be made in different configurations such as a split in the centre, full mesh etc.

Please note with these systems, that the curtains do slide along the track when deployed and will need to be corrected while in use. This is a common factor in the design, and can only be alleviated with floor hold downs.

Curtains are custom made to specific requirements. Please contact us for more detail.
