

# ADJUST A GOAL

## AAG

The Adjust A Goal range allows all ages into the game and make your facility “user” friendly to even the youngest of players giving them the ability to compete at heights that are fair and fun for them. Our height adjusters lower your backboard to any height between 2400mm (8’) and 3050mm (10’). The goal height indicator is located on the unit for accurate adjustment. The height is changed by an awning type hand crank.

All our height adjusters feature direct goal

attachment to transfer any stress and load from the goal to the backstop’s structure instead of depending on the backstop for support.

A unique feature is the spring activated manual locking mechanism is designed to lock the rod in place eliminating any “drift” of the backboard height on all manual height adjusters.

Manual height adjusters can be upgraded or converted to electric by adding a motor kit. Simply turn the key to raise or lower the backboard.
