Aluminum Player Shelters

A range of high-quality player and official shelters available in different sizes to suit all sports.

Manufactured from high quality aluminium, the shelters are finished with a durable transparent Lexan Polymer, and with your choice of timber, or long-life aluminium seats.

The systems are freestanding and can be bolted in place if required. They also come with a foot plate to ease wear on the substrate if placed over natural grass.

Systems come in a modular demountable design for easy transport and possible extension in the future if required and include a special flow through feature in the design to allow air to circulate to increase player comfort in hot condition.
